

Modeling-ablation scope: parameter-space corruption is recoverable; dynamics-space corruption is not

A modWorm (Cook ODE, 7-D) -- DYNAMICS space
state-noise corruption collapses behaviour to 0.30-0.46

B FlyGym (MuJoCo, 126-D) -- DYNAMICS space
integrator diverges on 4/6 levels; nothing to recover

C BAAIWorm (NEURON 200-cell) -- PARAMETER space
30/30 cells $L_{\text{final}} < L_0$, mean $\Delta L/L_0 = -29.4\%$ (6 levels x 5 seeds)
